

# Eiffel Tower

The Eiffel Tower is a wrought-iron lattice tower located on the Champ de Mars in Paris, France. It was designed by engineer Gustave Eiffel and completed in 1889 as the entrance arch for the World's Fair.

Standing at 330 meters tall, the Eiffel Tower was the tallest man-made structure in the world for 41 years, until the completion of the Chrysler Building in New York City in 1930.

The tower consists of three levels accessible to visitors, with restaurants on the first and second levels. The top level's observation deck offers panoramic views of Paris and is the highest observation deck accessible to the public in the European Union.

Initially criticized by some prominent artists and intellectuals of the time for its design, the Eiffel Tower has since become a global cultural icon of France and one of the most recognizable structures in the world.

The tower is repainted every seven years to protect it from rust, requiring approximately 60 tonnes of paint. It also serves as a broadcasting antenna for radio and television signals.
